⊟ Setup Xunit

in list <u>Breakouts</u>

≡ Description   Edit

This is how you setup Xunit to write unit test for each project you write. Anytime you create a new project you must repeat these steps

☑ Xunit Setup   Delete

0% |▮───|

- [ ] 0) Start with a fresh Project, this has to be done every time you make a new project

- [ ] 1) In visual studio go to the top menu and select tools --> NuGet Package Manager ----> Manage NuGet Packages for solution...

- [ ] 2) Go to the Browse tab in the manager

- [ ] 3) Search for and install Xunit

- [ ] 4) Search for and install Xunit.runner.visualstudio

- [ ] 5) Search for and install Xunit.core

- [ ] 6) Go to the build menu at the top and hit rebuild

- [ ] Congrats if you made it here you're ready to start writing Unit tests

- [ ] 7) Common Error fix: install the nuget package: <u>Microsoft.NET</u>.Test.Sdk

- [ ] 8) Common Error fix 2: Delete or Move your main method as Xunit makes it own
